Beautiful rings.

Ice and rock.

Gas giant.

Uranus

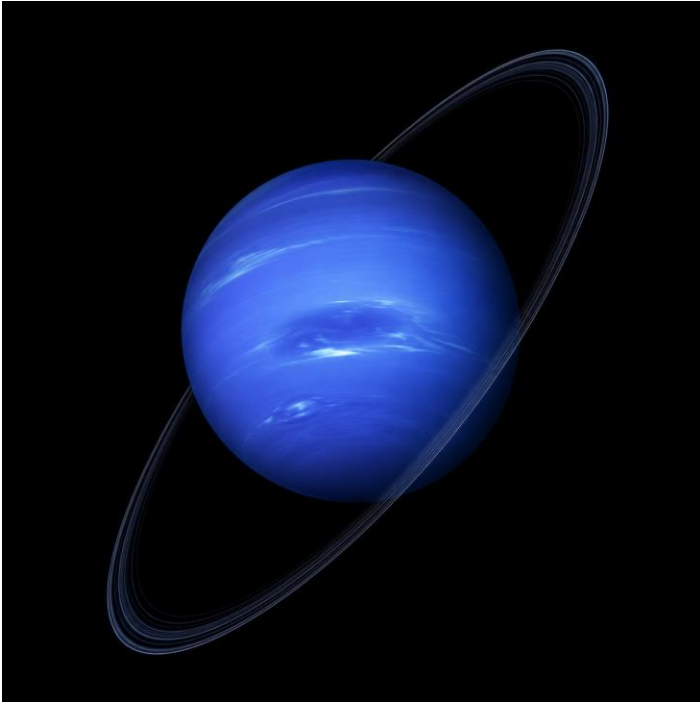

Very cold.

Spins on side.

Far from Sun.

Neptune

Farthest planet.

Strong winds.

Deep blue.

Pluto

Dwarf planet.

Small and far.

Very cold.

About This Booklet

Our solar system has eight planets and one dwarf planet. They all travel around the Sun. Each planet is different. Some are hot, some are cold, some are big, and some are small. Earth is the only planet we know that has life.

This is a Green Level Reader.

Please see Red and Blue Versions for a more challenging read.
